

## Board Policy

Code No. 507.3

### COMMUNICABLE DISEASES - STUDENTS

Students with a communicable disease will be allowed to attend school provided their presence does not create a substantial risk of illness or transmission to other students or employees. The term "communicable disease" shall mean an infectious or contagious disease spread from person to person, or animal to person, or as defined by law.

Prevention and control of communicable diseases shall be included in the school district's bloodborne pathogens exposure control plan. The procedures shall include scope and application, definitions, exposure control, methods of compliance, universal precautions, vaccination, post-exposure evaluation, follow-up, communication of hazards to employees and record keeping. This plan shall be reviewed annually by the superintendent and school nurse.

The health risk to immunosuppressed students shall be determined by their personal physician. The health risk to others in the school district environment from the presence of a student with a communicable disease shall be determined on a case-by-case basis by the student's personal physician, a physician chosen by the school district or public health officials.

It shall be the responsibility of the Superintendent, in conjunction with the school nurse, to develop administrative regulations stating the procedures for dealing with students with a communicable disease.

The following website of communicable diseases is offered as a guideline in establishing a communicable disease control program in the Bettendorf Schools. This list is used by the District nurses and other staff members responsible for exclusions and readmissions of affected students. The diseases listed are not meant to be all inclusive; but are some of the most frequently encountered diseases affecting school age children.

Concise descriptions and recommendations for exclusion of cases from school can be found at the following link: <https://idph.iowa.gov/CADE/reportable->
